Water is a most essential source in our daily life. Each person wants to drink and use clean and healthy water. But as a person every one should be the responsible to maintain our water resources in cleanliness way. So here as a responsible person I'm going to present about the problem and toxic substance s in drinking water and also the water which was used in common things. Kanthadu is a beautiful and small village. But they faced a big problem in usage of water. The drinking water was affected by prawn wastes and sea water mixing. So, people use the pipe to transfer the water from 2km for their daily use and agriculture purpose. I want to help and given the solution of their problem. I am going to use seeds and natural fibers to purifying the water to their use.
